What is fertigation and nutrient management in greenhouse? Fertigation is a precise, controlled and tested method of applying fertilisers, nutrients and other water-soluble products through drip lines and sometimes by micro- sprinkler irrigation systems as per crop requirements, its stage, canopy size, soil or season, etc.

What is a fertigation system for hydroponics? A Drip Fertigation System feeds a liquid nutrient solution to the plants in the exact proportions they require. The systems can be fed via a batched dosing tank or an inline injection system. This ensures the exact nutrient strength and pH level is attained before it is fed to the

crop.

Which fertilizer is best for fertigation? Fertilizer used in fertigation Special fertilisers like mono ammonium phosphate (Nitrogen and Phosphorus), poly feed (Nitrogen, Phosphorus and Potassium), Multi K (Nitrogen and Potassium), Potassium sulphate (Potassium and Sulphur) are highly suitable for fertigation as they are highly soluble in water.

What is fertigation of nutrients? 'Fertigation' is the technique of supplying dissolved fertiliser to crops through an irrigation system. When combined with an efficient irrigation system both nutrients and water can be manipulated and managed to obtain the maximum possible yield of marketable production from a given quantity of these inputs.

What is the best method of feeding plants in a greenhouse? Maintaining adequate nutrition is among the most critical aspects of producing greenhouse crops. At present most growers utilize a liquid feed program as their primary means of supplying plant nutrients. This program may also be supplemented with granular or slow release fertilizers added to the growing medium.

What is the difference between fertigation and fertilizers? Fertigation is the application of fertilizers through irrigation system and is the most advanced and efficient practice of fertilization. Drip system is the most adopted and effective way of fertigation for efficient use of fertilizer and irrigation water.

What is the most reliable method of watering greenhouse plants? Drip irrigation is generally considered the most efficient greenhouse watering system. Through this method, water is delivered slowly and accurately to growing media, ensuring crops get water supplied directly to their root zone.
