**Q: What is the difference between structural and molecular formulas? A:** A structural formula shows the arrangement of atoms in a molecule, while a molecular formula only gives the number of each type of atom in the molecule. **Q: How do you determine the hybridization of a carbon atom? A:** The hybridization of a carbon atom is determined by the number of bonds it forms. A carbon atom that forms four single bonds is  $\text{sp}^3$  hybridized. A carbon atom that forms one double bond and two single bonds is  $\text{sp}^2$  hybridized. A carbon atom that forms two double bonds is  $\text{sp}$  hybridized.

**Q: What is the relationship between resonance and stability? A:** Resonance is a phenomenon in which a molecule has two or more valid Lewis structures. Resonance stabilizes molecules by spreading out the electron density over multiple atoms. The more resonance structures a molecule has, the more stable it is.

**Q: How do you predict the products of an organic reaction? A:** To predict the products of an organic reaction, you need to know the mechanism of the reaction. The mechanism is a step-by-step description of how the reaction occurs. Once you know the mechanism, you can use it to predict the products of the reaction.

**Q: What is the purpose of a reaction coordinate diagram? A:** A reaction coordinate diagram is a graph that shows the energy changes that occur during a
