If you have grappled with elementary physics then you know that he invented calculus and the three laws of motion upon which all of mechanics is based.

**Who started classical mechanics?** Newton founded his principles of natural philosophy on three proposed laws of motion: the law of inertia, his second law of acceleration (mentioned above), and the law of action and reaction; and hence laid the foundations for classical mechanics.

**Who invented solid mechanics?** HISTORICAL SKETCH Solid mechanics developed in the outpouring of mathematical and physical studies following the great achievement of Isaac Newton (1642-1727) in stating the laws of motion, although it has earlier roots. The need to understand and control the fracture of solids seems to have been a first motivation.
