The Power Broker: Robert Moses and the Fall of New York

Question 1: Who was Robert Moses and what was his role in New York City?

Robert Moses was a powerful New York City planner and politician who played a major role in shaping the city's infrastructure and development during the 20th century. As the head of the Triborough Bridge and Tunnel Authority, he oversaw the construction of numerous public works projects, including bridges, highways, and parks.

Question 2: What was the "Fall of New York" and how did Moses contribute to it?

The "Fall of New York" refers to the decline of the city's economy, population, and quality of life in the decades following World War II. Moses's policies, which prioritized automobile traffic and suburban development, are widely blamed for contributing to this decline by creating urban sprawl, congestion, and environmental degradation.

Question 3: How did Moses's love of cars influence his planning decisions?

Moses was an avid motorist who believed that the future of transportation lay in automobiles. He invested heavily in highway construction, often at the expense of mass transit. This led to the proliferation of car culture in New York City and increased suburbanization, as people sought homes farther away from the urban core to escape traffic.

Question 4: What were the social and economic consequences of Moses's policies?

Moses's projects often had a negative impact on low-income and minority communities. The construction of highways displaced thousands of people and destroyed vibrant neighborhoods. Additionally, his focus on automobile transportation further exacerbated economic inequality, as it made it more difficult for people without cars to access jobs and services.

Question 5: What lessons can be learned from the legacy of Robert Moses?

The legacy of Robert Moses is complex and controversial. While he was responsible for creating some of New York City's iconic infrastructure, his policies also had lasting negative consequences for the city's social and economic well-being. His approach to urban planning serves as a cautionary tale about the importance of considering the long-term impacts of development decisions on communities and the environment.

The Narcissistic Family: Diagnosis and Treatment

by Stephanie Donaldson Pressman

What is the narcissistic family?

The narcissistic family is a family system in which one or both parents exhibit narcissistic personality disorder (NPD). NPD is a mental disorder characterized by an inflated sense of self-importance, a lack of empathy for others, and a need for admiration. People with NPD often have difficulty forming healthy relationships, and they may be manipulative, controlling, and exploitative.

How does the narcissistic family affect children?

Children who grow up in narcissistic families may experience a range of negative outcomes, including:

- Low self-esteem
- Difficulty forming healthy relationships
- Anxiety and depression
- Substance abuse
- Eating disorders
- Personality disorders

How is the narcissistic family diagnosed?

The narcissistic family is diagnosed by a mental health professional, such as a psychologist or psychiatrist. The diagnosis is based on the following criteria:

- One or both parents meet the criteria for NPD.
- The children in the family exhibit symptoms of emotional distress, such as anxiety, depression, or low self-esteem.
- The family system is characterized by manipulation, control, and exploitation.

How is the narcissistic family treated?

Treatment for the narcissistic family typically involves therapy for both the parents and the children. The goal of therapy is to help the parents understand their NPD and its impact on their family, and to help the children develop healthy coping mechanisms. Treatment may also include medication to manage symptoms such as anxiety or depression.

What is the prognosis for the narcissistic family?

The prognosis for the narcissistic family is variable. Some families are able to recover and build healthy relationships, while others continue to struggle. The prognosis is influenced by a number of factors, including the severity of the NPD, the willingness of the parents to change, and the support system available to the family.
