## Sudoku: A Tutorial

### What is Sudoku?

Sudoku is a logic-based puzzle that involves filling a 9x9 grid with numbers from 1 to 9, such that each row, column, and 3x3 subgrid contains all the digits without repetition.

### How to Solve a Sudoku Puzzle?

To solve a Sudoku puzzle, follow these steps:

1. **Scan for Known Numbers:** Look for any numbers that are already filled in. These numbers will serve as anchors for the rest of the grid.
2. **Eliminate Possibilities:** For an empty cell, identify the row, column, and subgrid it belongs to. Eliminate any numbers that already appear in those three sections.
3. **Narrow Down Options:** Look for cells where only one possible number remains based on the elimination process. Fill in those cells.
4. **Use Logic:** Apply deductive reasoning to determine the remaining numbers. For example, if a row contains only two possible numbers for a certain cell, and one of those numbers is already used in the column or subgrid, then the remaining number must go in that cell.
5. **Guess and Check:** As you progress, there may be times when you need to make an educated guess for a cell. Check the impact of your guess on the rest

of the grid. If it leads to a contradiction, try another number.
