How do you fix an ignition switch that won't turn?

What does it mean when you turn the key in the ignition and nothing happens? The most common reason cars don't start is a dead or faulty battery. In older vehicles it's part of the key barrel, and you activate the ignition switch by turning the key.

What happens if you mix up black and white wires? The black wire is the power wire. The white wire is the neutral. This completes the circuit back to the box. If you mix them up, you will trip the breaker and/or start a fire.

Can red and black wires be connected together? These wires are typically used for switch wiring as well as the interconnection between smoke detectors hard-wired into the power system.
