**Why is my gum paste not drying?** Solution: If the gumpaste is too soft, troubleshoot gumpaste by adding a small amount of Wilton Gum-Tex or Tylose powder a little bit at a time until the paste feels firmer, but make sure you don't overdo it. If the gumpaste is too sticky, knead in confectioner's sugar until it doesn't feel sticky any more.

**How to fix a dry gum paste?**

**What to do if my gum paste is too sticky?** If the paste is too sticky, add more powdered sugar a little at the time. Wrap paste in two pieces of plastic wrap. Place in a ziplock bag and store in refrigerator.

**How to soften flower paste?** Using a sharp knife, slice off a small section of paste. Either knead each small section separately or pile them up and microwave for 10-15 seconds. Though it is edible, we don't suggest eating decorations made from gum paste or using it to cover your cakes, as it does dry quite hard and can be difficult to eat.

**What powder for gum paste?** CMC/Tylose Powder is the most common stabilizer you'll see in Gumpaste Recipes. It's very strong and rubbery if you add too much, but in the right amount it adds structure and helps your gumpaste dry strong and hard. It's often added to Fondant if you need it drier or firmer than usual.
