Textbook of Medical Pharmacology by Padmaja Udaykumar

Written by renowned pharmacologist Dr. Padmaja Udaykumar, this textbook provides a comprehensive overview of pharmacology for medical students and practitioners. The book covers various aspects of pharmacology, including drug mechanisms, therapeutic uses, adverse effects, and drug interactions.

1. What is the primary goal of drug therapy? Answer: To achieve a desired therapeutic effect while minimizing adverse side effects.

2. What factors influence drug absorption, distribution, metabolism, and excretion? Answer: Factors such as drug formulation, route of administration, patient's age and weight, and liver and kidney function.

3. What is the difference between a competitive and non-competitive antagonist? Answer: Competitive antagonists bind to the same receptor as the agonist, preventing its activation. Non-competitive antagonists bind to a different site on the receptor, altering its conformation to reduce agonist affinity.

4. How does drug metabolism affect its activity and duration of action? Answer: Metabolism generally inactivates drugs and reduces their duration of action. However, in some cases, metabolites may have pharmacological activity of their own.

5. What are the ethical considerations in drug therapy? Answer: Ethical considerations include informed consent, patient confidentiality, and the potential for drug abuse and misuse. It is important for healthcare professionals to balance patient autonomy with the responsible use of drugs.
