Solving Sudoku: A Guide by Michael Mephram

1. What is Michael Mephram's method for solving Sudoku?

Michael Mepham's approach to Sudoku involves a systematic process that combines logical reasoning, elimination, and educated guesses. He emphasizes the importance of identifying "naked pairs," which are two squares in a row, column, or block that contain the same two possible numbers. By eliminating these numbers from other squares in the same group, he creates opportunities for further deductions.

2. How do you find naked pairs?

To identify naked pairs, scan each row, column, and block for squares containing only two possible numbers. These numbers will appear in at least one other square within that group. Circle or highlight the naked pairs to keep track of them.

3. How do you eliminate candidates based on naked pairs?

Once you have identified naked pairs, remove those two numbers as possibilities from all other squares in the same row, column, or block. For example, if a naked pair is found in row 2, squares 3-9 in row 2 can no longer contain those numbers.

4. What other techniques does Michael Mepham use?

In addition to finding naked pairs, Michael Mepham employs other techniques such as "hidden pairs," where two squares in a group share the same two possibilities but are not adjacent, and "singles," where a square has only one possible solution. He also encourages trying educated guesses and backtracking if necessary.

5. How effective is Michael Mepham's method?

Michael Mepham's method has proven highly effective for solving Sudoku puzzles of all levels. By combining logical deduction, elimination, and educated guesses, his approach provides a structured and efficient way to solve even the most challenging puzzles. With practice and patience, Sudoku enthusiasts can master this technique and enjoy the satisfaction of solving these brain-teasing puzzles.
