**What are the 5 main types of engineering economic decisions?** The five main types of engineering economic decisions are (1) service improvement, (2) equipment and process selection, (3) equipment replacement, (4) new product and product expansion, and (5) cost reduction. The factors of time and uncertainty are the defining aspects of any investment project.

**What is the role of engineering economic analysis?** Engineering economic analysis is a combination of quantitative and qualitative techniques to analyze economic differences among engineering alternatives in selecting the preferred design. The cash flow approach is one of the major approaches in the engineering economic analysis.

**How is economics used in engineering?** For example, engineering economic analysis helps a company not only determine the difference between fixed and incremental costs of certain operations, but also calculates that cost, depending upon a number of variables. Further uses of engineering economics include: Value analysis. Linear programming.

**What is the economics of decision-making?** To make an optimal decision, economists ask: "What are the extra (marginal) costs and what are the extra (marginal) benefits associated with the decision?"
