What is the most painful fracture type? Comminuted fracture This type of fracture requires a lot of force, which causes your bone to break into several pieces. A comminuted fracture typically brings very intense pain. Because the fracture is in several pieces, surgery is usually required to fix it.

What fracture is most damaging? Comminuted fracture. Comminuted fractures are a more severe type of fracture, because your bone breaks into several pieces. You could have other damage with this type of fracture, due to the multiple bone shards.
