**What is language attrition in sociolinguistics?** 'Language attrition' describes the loss of, or changes to, grammatical and other features of a language as a result of declining use by speakers who have changed their linguistic environment and language habits.

**What are the different types of language attrition?** This paper also highlights four language attrition types: (1) loss of L1 in L1 environment; (2) loss of L1 in L2 environment; (3) loss of L2 in L1 environment; and (4) loss of L2 in L2 environment.

**What are the factors of language attrition?** The process of language attrition is influenced not only by linguistic factors, but also by extralinguistic ones such as age at onset of attrition, achievement level at onset of attrition, time since onset of attrition, amount of exposure to the attriting language, attitudes and motivation, etc.

**What is the theory of language attrition?** Language attrition refers to the loss of any language or any portion of a language by an individual or a speech community. It is often considered as the reverse process of language acquisition.

**What is language attrition characterized by?** The term first language attrition (FLA) refers to the gradual decline in native language proficiency. As speakers use their L2 frequently and become proficient (or even dominant) in it, some aspects of the L1 can deteriorate or become subject to L2 influence.

**What effects language attrition?** Language attrition affects individuals across the lifespan, from children losing proficiency in their heritage language to adults experiencing reduced fluency in their L1 and/or L2. It holds profound implications for

fields such as bilingualism, language education, cognitive psychology, and sociolinguistics.

**What are the 5 modes of attrition?**

**How many types of attrition are there?** Employee attrition is defined as employees leaving their organizations for unpredictable or uncontrollable reasons. Many terms make up attrition, the most common being termination, resignation, planned or voluntary retirement, structural changes, long-term illness, layoffs.

**What is the difference between language shift and language attrition?**

According to this commonly adopted view (e.g., De Bot, 2000; Schmid, 2002; Köpke, 2004a; De Leeuw, 2008; Zaretsky and Bar-Shalom, 2010), language shift refers to a sociolinguistic aspect of usage, whereas language attrition indicates changes occurring at the cognitive/psycholinguistic level.

**What are the causes of language shift in sociolinguistics?** Causes of Language Shift. Language shift is generally the result of a combination of social and economic factors, prestige and language ideologies, power differentials, and historical trauma.

**What is primary language attrition in the context of bilingualism?** In the case of attrition of the first language (L1), it is assumed that continuous immersion in a second language (L2) environment will lead to a growing influence of the L2 on the L1, which is then becoming the non-dominant language.

**What is language loss in sociolinguistics?** Answer and Explanation: Language loss or language attrition is when a speaker loses their first native language. This process usually happens when the speaker is isolated from others who speak their native language and a second language is learned to replace the first.

**What is the theory of attrition?** A theory of student attrition describes the attrition process - it explains why students drop out of school. In another way, a theory of student attrition can be used to predict which students are most likely to drop out of school.

**What is language attrition pdf?** 'Language attrition' describes the loss of, or changes to, grammatical and other features of a language as a result of declining use by speakers who have changed their linguistic environment and language

habits.

**What is lexical attrition?** Lexical attrition has often been described as a process that leads to a person's loss of the ability to retrieve words from memory (Stolberg & Münch, 2010; Isurin, 2013), if not the complete erasure of those words from the person's mental lexicon (Pallier et al., 2003).

**What is the difference between language attrition and language shift?** According to this commonly adopted view (e.g., De Bot, 2000; Schmid, 2002; Köpke, 2004a; De Leeuw, 2008; Zaretsky and Bar-Shalom, 2010), language shift refers to a sociolinguistic aspect of usage, whereas language attrition indicates changes occurring at the cognitive/psycholinguistic level.

**What is an example of language shift in sociolinguistics?** In other words, language shift is the gradual process by which a bilingual community becomes monolingual. For example, a language shift occurred in Ireland circa 1600–1900 CE: the Irish language was gradually replaced by English.

**What are examples of language death in sociolinguistics?** The extinction of Cornish in England is an example of language death as well as shift (to English). And the demise of Norwegian as an immigrant language in the USA exemplifies shift without death, as Norwegian is of course still spoken in its original setting in Norway.

**What is primary language attrition in the context of bilingualism?** In the case of attrition of the first language (L1), it is assumed that continuous immersion in a second language (L2) environment will lead to a growing influence of the L2 on the L1, which is then becoming the non-dominant language.

**The Mask of Motherhood: How Becoming a Mother Changes Our Lives and Why We Never Talk About It**

Throughout history, the role of motherhood has been shrouded in a veil of idealized perfection. However, the reality is far from the picture-perfect image often portrayed. Becoming a mother brings about profound transformations in our lives, both physically and emotionally, that we rarely discuss openly.

**1. The Physical Toll**

Pregnancy and childbirth can take a significant physical toll on a woman's body. From weight gain to hormonal imbalances, these changes can leave lasting impacts. Sleep deprivation, which is a common challenge for new mothers, can further exacerbate physical exhaustion.

## **2. The Emotional Journey**

Becoming a mother sparks a rollercoaster of emotions, ranging from overwhelming joy to deep-seated anxiety. The constant responsibility for a tiny human's well-being can lead to a sense of isolation and overwhelm. Additionally, the transition from being "self-focused" to "other-focused" can be a challenging emotional shift.

## **3. The Impact on Relationships**

Motherhood can strain relationships with partners, family, and friends. The lack of time and energy available for social interactions can result in a feeling of disconnection. Additionally, differing parenting styles and expectations can lead to conflicts within relationships.

## **4. The Loss of Identity**

For many women, motherhood can bring about a profound loss of personal identity. The focus shifts from their individual ambitions and interests to those of their child. This can lead to a sense of emptiness and a questioning of one's purpose beyond motherhood.

## **5. The Silence Surrounding It**

Despite the challenges and transformations that come with motherhood, there is a surprising lack of open dialogue about these experiences. Societal expectations often pressure mothers to conform to a narrow stereotype, leaving little room for them to express their struggles. This silence can perpetuate a sense of shame and isolation.

It is crucial to break the silence surrounding the multifaceted experience of motherhood. By openly discussing the physical, emotional, and relational challenges, we empower mothers to seek support and acknowledge the profound impact that becoming a mother has on our lives. It is only through open and honest

conversations that we can destigmatize the "mask of motherhood" and create a more authentic and supportive environment for mothers.
