The Lords of Strategy: Secret Intellectual History of the New Corporate World

By Walter Kiechel III

Q: What is the main thesis of "The Lords of Strategy"?

A: Kiechel argues that the modern corporate world was shaped by a group of obscure intellectuals known as the "strategy theologians." These thinkers, who worked at the RAND Corporation and other institutions during the Cold War, developed a new way of thinking about business strategy that emphasized rational

analysis, long-term planning, and a focus on market share.

Q: Who were some of the most influential strategy theologians?

A: Some of the most influential strategy theologians included Herman Kahn, who developed the concept of "escalation dominance," and Andrew Marshall, who coined the term "global village." These thinkers helped to create a new language and framework for understanding the complexities of the modern business world.

Q: How did the strategy theologians impact the corporate world?

A: The strategy theologians' ideas had a profound impact on the corporate world. Their emphasis on rational analysis and long-term planning helped to create a new generation of business leaders who were more focused on creating shareholder value than on short-term profits. The strategy theologians' ideas also helped to legitimize the use of consultants and other external experts in corporate decision-making.

Q: What are some of the criticisms of "The Lords of Strategy"?

A: Some critics have argued that Kiechel's book overstates the importance of the strategy theologians. They point out that many of the ideas that the strategy theologians developed were already in circulation in the business world. Others have criticized Kiechel's focus on the RAND Corporation, arguing that it was just one of many institutions that contributed to the development of modern strategy thinking.

Q: What is the legacy of the strategy theologians?

A: The strategy theologians' legacy is mixed. On the one hand, their ideas helped to create a more rational and sophisticated approach to business strategy. On the other hand, their emphasis on market share and shareholder value has been criticized for contributing to the short-term focus and excessive risk-taking that characterized the corporate world in the late 20th and early 21st centuries.
