What are knots in topology? Because the strands of a knot are flexible like string, mathematicians view knot theory as a subfield of topology, the study of malleable shapes. Sometimes it is possible to untangle a knot so it becomes a simple circle, which we call the "unknot." But more often, untangling a knot is impossible.

What is the topology of low dimensional manifolds? In mathematics, low-dimensional topology is the branch of topology that studies manifolds, or more generally topological spaces, of four or fewer dimensions. Representative topics are the structure theory of 3-manifolds and 4-manifolds, knot theory, and braid groups.

What is a knot in 3 dimensions? A knot is an embedding of the circle (S^1) into three-dimensional Euclidean space (R^3), or the 3-sphere (S^3), since the 3-sphere is compact. Two knots are defined to be equivalent if there is an ambient isotopy between them.

What is a knot invariant? A knot invariant is a quantity defined on the set of all knots, which takes the same value for any two equivalent knots. For example, a knot group is a knot invariant. Typically a knot invariant is a combinatorial quantity defined on knot diagrams.

What is the strongest topology? The norm topology itself is sometimes called the strong topology, but more generally it is a polar topology of a dual pair. If X is a Banach space, with continuous dual X' , then the weakest topology on X making each linear functional in X' continuous is called the weak topology.

What is the difference between topology and manifold? A manifold may be endowed with more structure than a locally Euclidean topology. For example, it could

be smooth, complex, or even algebraic (in order of specificity). A smooth manifold with a metric is called a Riemannian manifold, and one with a symplectic structure is called a symplectic manifold.

What are the topological classification of 3-manifolds? Thus every topological 3-manifold has a unique smooth structure, and the classifications up to diffeomorphism and homeomorphism coincide. Thus it makes no essential difference if we consider 3-manifolds as mere topological manifolds, or as piecewise-linear manifolds or smooth manifolds.

What is a knot in a network? In telecommunications networks, a node (Latin: nodus, 'knot') is either a redistribution point or a communication endpoint. A physical network node is an electronic device that is attached to a network, and is capable of creating, receiving, or transmitting information over a communication channel.

How do you explain knots? Currents Tutorial The term “knot”, in reference to currents, is defined as one nautical mile per hour and is used to measure speed. A nautical mile is slightly more than a standard mile.

What are knots in a curve? Roughly speaking, knot points are points at which the various segments that make up the spline are joined together. To completely specify a B-spline curve of order m with L control points we have to specify a knot vector $(t_0, t_1, \dots, t_{L+m})$. Values in the knot vector can be repeated.

What are knots functions? Some knots are used to attach the rope (or other knotting material) to other objects such as another rope, cleat, ring, or stake. Some knots are used to bind or constrict objects. Decorative knots usually bind to themselves to produce attractive patterns.

Reasons for the differentials in group opportunities and outcomes. The relevance of social hierarchies and social power in everyday life.

What is a person who studies human society called? Anthropologists study the characteristics of past and present human communities through a variety of techniques. In doing so, they investigate and describe how different peoples of our world lived throughout history. Anthropologists aim to study and present their human subjects in a clear and unbiased way.

What are the three main types of society? The major types of societies are the preindustrial, industrial and postindustrial societies.

What are the following reasons why people lived together as a society? Answer and Explanation: People live in societies primarily because of their need for others. As mentioned above, humans are social and need to be among others and belong to a group. By interacting with others, people develop their communication and cooperation skills.

Why is society formed? Societies are formed of our social groupings at varied levels, from small towns, through countries, to broader cultural groupings such as a Western society. Within such societies people tend to form particular cultures, formed of the ideas, customs, and social behaviours that make one society distinct from another.

What are the 5 importance of society? The importance of society cannot be overstated. It provides the framework for social cohesion, cultural transmission, personal development, economic interdependence, social control, and collective problem-solving.

Which best defines society? Society is defined as 'a group of people who live in a definable community and share the same culture'. Society is often the cornerstone of many sociologists' research.

What word does society come from? The term "society" which came from the Latin word *societas* generally designates persons belonging to a specific in-group. In

anthropology, the term is used to refer not only to a group of people but also to the complex pattern of the norms of interaction that arise among them.

How does society shape reality? Sociologists understand that reality is socially constructed, meaning that people shape their experiences through social interaction. In 1966 sociologists Peter Berger and Thomas Luckmann wrote a book called *The Social Construction of Reality*.

How do societies grow? Development is the result of society's capacity to organize resources to meet challenges and opportunities. Society passes through well-defined stages in the course of its development. They are nomadic hunting and gathering, rural agrarian, urban, commercial, industrial, and post-industrial societies.

What kind of society do we live in today? Knowledge Society, History of Thus, such names as 'capitalist' society or 'industrial' society were created.
