Over the years what made the Unicorn a banger was its refined engine with a decent punch. Proper Japanese refinement and reliability. Top that off with an easy-on-the-pocket fuel economy.

Which color unicorn is best? Honda CB Unicorn 160 is available in 5 colors. Matte Marvel Blue Metallic Honda CB Unicorn 160 looks best. Imperial Red Metallic, Pearl Igneous Black, Matte Axis Grey, Pearl Amazing White colors also look good on this bike.

Is Unicorn suspension good? High cost as compared to features. Riding on the smooth road is good.. Major problem is the rear shock absorber of unicorn 160 bs6 is faulty and useless almost all these models of unicorn have the same issue.

What is the range of unicorn full tank? With a fuel tank capacity of 13 litres, this bike can go upto 780 kms on full tank.

What is the idle rpm of Honda Unicorn? The ideal RPM of Honda Unicorn is 1400 \pm 100 rpm.

How long can an air cooled bike engine run continuously? The air cooled motorcycle engine can run continuously for about 1 hour without damaging any part. If the engine is operated for a long time, the engine may overheat and damage the piston rings, cylinder walls and valves.

Which petrol is best for Unicorn? You may go for both premium and normal petrol as both would be the fine options for the Honda Unicorn. Moreover, if you want slightly better mileage and performance, then you may go with power petrol.

How much engine oil required for Honda Unicorn?

Can I use 20w40 instead of 10W30? “viscosity at low temperature”W“viscosity at high temperature”. 20w40 is thicker at high temperatures (normal operating condition of engine) compared to 10w30. For proper lubrication at operating temperatures high viscosity is desirable. So 20w40 will be good compared to 10w30 at normal operating conditions.

What is the high speed of Honda Unicorn? The top speed of Honda Unicorn is 106 kmph.

What is the real time mileage of Honda Unicorn? It's gives 45-50kms/ltr. in City riding Conditions And about 50-55kms/ltr. In Highway riding Conditions And It's all upto the riders driving condition... Honda CB Unicorn 160 Price - ? 85,926 onwards (On-road, Navi Mumbai).

What is the maximum power of Honda Unicorn?

What is the fuel consumption of Honda Unicorn? The mileage of Honda Unicorn is 60 kmpl. This is the claimed ARAI mileage for all the variants of Unicorn.

What is the range of unicorn full tank? With a fuel tank capacity of 13 litres, this bike can go upto 780 kms on full tank.

How to increase Honda Unicorn mileage? The best mileage from Honda Unicorn can be achieved through regular maintenance and servicing of the bike, using high-

quality fuel, maintaining correct tyre pressure, and adopting a smooth riding style. Avoiding unnecessary acceleration and sudden braking can also significantly improve the bike's mileage.

What is the mileage per liter of Honda Unicorn 100cc? The Mileage Of Honda Unicorn is 60 kmpl.

Which model unicorn is best? There are difference only in certain features viz. Mileage of Honda Unicorn 150 (65 Km/L) is better than that of Honda Unicorn 160(55–60 Km/L). The ex showroom prices are not so much different on both models. The ground clearance shows that Honda Unicorn 150 is better than that of Honda Unicorn 160.

Is Honda Unicorn worth it? I am using honda unicorn from last 16 months and the bike is superb even on muddy and farm road. I have ridden the bike above 38000. If your are genuine biker then it will give +60 mileage. I got highest 63km/l mileage on my bike.It can easily touch 120 km/h speed but try this on empty road.

What is the high speed of Honda Unicorn?

What is the lifespan of Unicorn? Average Lifespan: approx 1,000 yrs.

Is Unicorn good for short riders? Can I take Honda Unicorn? Honda Unicorn features a lower saddle height of 798 mm which favors the shorter riders, however, we would suggest you to take a test ride before making the final decision. Follow the link and select your desired city for dealership details.

How much weight can Unicorn carry? The maximum weight capacity of Honda Unicorn is 170kg.

How much engine oil required for Honda Unicorn?

What is the idle rpm of Honda Unicorn? The ideal RPM of Honda Unicorn is 1400 \pm 100 rpm.

Is Honda Unicorn 160 good for long ride? Yes Honda CB Unicorn 160 is good for long rides. As I have ridden it for more than 400kms in single shot. Engine doesn't stress but it does little bit with pillion. It goes smoothly at 80–85kmph.

What is the real mileage of Honda Unicorn? As reported by Honda Unicorn owners, the real mileage of Unicorn is 50 kmpl. It delivers better mileage than 100% of street bikes.

Does the Honda Unicorn have ABS? Yes, ABS is available in 1 variant(s) of Honda Unicorn. Note: The primary objective of ABS is to mitigate skidding, which occurs when braking forcefully leads to locked wheels, thereby compromising steering and control.

What is the difference between Honda Shine 100 and Unicorn? The claimed mileage of Honda Unicorn is 60 kmpl whereas the mileage of Honda Shine 100 is 55 kmpl. In technical specifications, Honda Unicorn is powered by 162.7 cc engine, while Honda Shine 100 is powered by 98.98 cc engine. Honda Unicorn is available in 4 different colours while Honda Shine 100 comes with 5 colours.

The Micro Hydro Pelton Turbine: Manual Design, Manufacture, and Installation for Small-Scale Hydro Power

Q: What is a Pelton turbine? A: A Pelton turbine is a type of water turbine that is designed to harness the power of high-velocity water streams. It is particularly suited for applications with high head (vertical drop) and low water flow rates.

Q: How does a Pelton turbine work? A: The Pelton turbine operates on the impulse principle. Water is directed from a nozzle at high speed and impinges on a series of cup-shaped blades. The impact of the water generates a torque that rotates the turbine shaft.

Q: What are the advantages of using a Pelton turbine for small-scale hydro power? A: Pelton turbines offer several advantages for small-scale hydro power applications:

- They are efficient at high head and low water flow rates.
- They are relatively simple to design and manufacture.
- They have a relatively high tolerance for debris and sediment.

Q: How do you design and manufacture a micro hydro Pelton turbine? A: Designing and manufacturing a micro hydro Pelton turbine requires specialized

EXPLORING STRATEGY

knowledge and skills. Typically, the process involves:

- Determining the operating parameters (e.g., head, flow rate, power output).
- Designing the turbine geometry (e.g., blade profile, number of blades).
- Using computer-aided design (CAD) to create 3D models.
- Fabricating the turbine components using appropriate materials (e.g., stainless steel, aluminum).

Q: How do you install a micro hydro Pelton turbine? A: Installing a micro hydro Pelton turbine involves several steps:

- Selecting a suitable site with sufficient head and flow rate.
- Constructing a penstock (pipe) to direct the water flow.
- Installing the turbine in the penstock.
- Connecting the turbine to a generator and control system.
- Commissioning the turbine and optimizing its performance.
