5G New Radio: A Comprehensive Guide**

What is 5G New Radio (NR)?

5G NR is the new radio access technology developed for the 5th-generation (5G) mobile network.

New Radio Access Technology

5G NR replaces the existing LTE (Long-Term Evolution) technology and offers significant advancements in:

- **Speed:** Up to 10 Gbps download and 1 Gbps upload speeds
- **Latency:** Less than 1 millisecond, enabling near-real-time applications
- **Coverage:** Enhanced signal propagation and range

Difference between 5G and 5G NR

5G refers to the overall 5th-generation mobile network, while 5G NR is the specific radio access technology that enables these advancements.

Benefits of 5G NR

- **Increased bandwidth:** Supports more data transfer
- **Lower latency:** Improves performance for applications like online gaming and virtual reality

- **Improved coverage:** Extends signal reach in rural and indoor areas

Range of 5G NR

The range of 5G NR varies depending on factors such as frequency band and antenna height. Typically, it extends to several kilometers (miles).

Disadvantages of 5G NR

- **Higher power consumption:** Can lead to reduced battery life on devices
- **Limited availability:** Not yet widely deployed compared to LTE
- **Interference:** Can occur in dense urban environments

Difference between LTE and 5G NR

Feature	LTE	5G NR
Speed	Up to 1 Gbps	Up to 10 Gbps
Latency	10-100 milliseconds	<1 millisecond
Coverage	Good	Excellent

5G NR Channels

5G NR uses two types of channels:

- **Physical resource blocks (PRBs):** Basic unit of radio resources
- **Frequency resource blocks (FRBs):** Larger blocks that combine multiple PRBs

Range of 5G Radio

The range of 5G radio varies based on frequency band and environment. Generally, higher frequencies have shorter ranges.

How Does a 5G Radio Work?

5G radios transmit and receive radio signals using antennas. They use advanced techniques like beamforming and modulation to optimize signal quality and range.

5G NR and NSA

NSA (Non-Standalone) is a deployment model for 5G NR that relies on existing LTE infrastructure for control and signaling. Standalone (SA) deployment connects directly to the 5G core network.

Why is 5G Called a New Radio?

5G NR is a complete redesign of the air interface and radio protocols used in mobile communication. It is significantly different from previous generations and offers superior performance.

Accuracy of 5G NR Positioning

5G NR supports high-accuracy positioning with a range of 10-30 meters.

Types of 5G

There are three main types of 5G:

- **Low-band:** Long range, lower speeds
- **Mid-band:** Good balance of speed and range
- **High-band:** Very high speeds, shorter range

Applications of 5G NR

- **Enhanced Mobile Broadband:** Super-fast internet on phones and tablets
- **Internet of Things (IoT):** Connecting billions of devices
- **Fixed Wireless Access:** Alternative to fiber and cable broadband
- **Ultra-Reliable Low-Latency Communication (URLLC):** Applications requiring minimal latency
- **Mission-Critical Communication:** For emergency services and public safety

Physical Signals in 5G NR

- **Waveform:** Orthogonal Frequency Division Multiplexing (OFDM)

- **Subcarrier spacing:** 15 kHz
- **Symbol duration:** 14 symbols per OFDM symbol

Verizon and 5G NR

Verizon supports 5G NR in its 5G network.

5G NR Support

5G NR supports:

- **Multi-Input Multi-Output (MIMO)** for increased throughput
- **Beamforming** for improved signal directivity
- **Channel coding** for robust data transmission

5G Frequency Bands

5G uses two main frequency bands:

- **Sub-6 GHz:** Frequencies below 6 GHz for long range and good coverage
- **Millimeter Wave (mmWave):** Frequencies above 24 GHz for very high speeds

5G NR Code Block

The 5G NR code block is 12 subcarriers across 14 OFDM symbols.

5G Voice over New Radio (VoNR)

VoNR is a voice call technology for 5G NR that provides high-quality voice and video calls.

New Radio Frequencies for 5G

5G uses a wide range of frequencies, including:

- **3.5 GHz**
- **28 GHz**

- 39 GHz
- **60 GHz
