Term 2 Test May 2014: Geography Paper for Grade 12

The Term 2 Geography paper for Grade 12 in May 2014 consisted of two sections: Section A and Section B. Section A tested students' knowledge of geographic concepts and themes, while Section B focused on the application of geographic knowledge to specific real-world scenarios.

Section A: Concepts and Themes

Q1: Define the term 'spatial distribution' and provide an example. A: Spatial distribution refers to the pattern of how a feature varies across a geographic area. For instance, the population density of a country shows the spatial distribution of people within its boundaries.

Q2: Explain the concept of 'scale' in geography. A: Scale refers to the relationship between the size of a geographic feature on a map or other representation and its actual size on the ground. Scale can be represented as a fraction (e.g., 1:50,000) or verbally (e.g., "large-scale" or "small-scale").

Q3: Describe the factors that influence the formation of landforms. A: Landforms are shaped by various factors, including tectonic processes (e.g., plate movement), erosion (e.g., by water, wind), and deposition (e.g., by glaciers).

Section B: Application of Geographic Knowledge

Q4: Describe a case study of a successful sustainable development initiative.

A: Sustainable development aims to meet present needs without compromising the ability of future generations to meet their own needs. Case studies of successful initiatives may include renewable energy projects, community-based conservation efforts, or urban planning strategies that prioritize environmental sustainability.

Q5: Analyze the geographic factors that influence population distribution in a specific region. A: Population distribution is influenced by a variety of geographic factors, such as climate, landforms, natural resources, and economic opportunities. Students were expected to select a specific region and discuss how these factors have shaped its population distribution.

By answering these questions accurately, Grade 12 students demonstrated their understanding of geographic concepts, their ability to apply geographic knowledge to real-world scenarios, and their critical thinking skills in analyzing geographic information.
