What is the formula of rusk? The chemical formula for rust is Fe_2O_3 and is commonly known as ferric oxide or iron oxide. The final product is a series of chemical reactions simplified below as- The rusting of the iron formula is simply 4Fe

+ 3O₂ + 6H₂O → 4Fe(OH)₃. The rusting process requires both the elements of oxygen and water.

What is the problem of rusk? Rusk can raise blood pressure and cholesterol levels, which raises the risk of heart attack and stroke when consumed. Rusk increases the risk of intestinal blisters, which can in turn cause bloating, indigestion, poor digestion, constipation, and a host of other issues.

How does rusk work? Rusk is basically a yeastless bread made using just Wheatflour, Salt, Bicarbonate, Water and a special baking and drying process. These loaves are then dried before being crushed to a crumb and can be added directly to the sausage mix and rehydrated with water.
