Students begin by analyzing and imitating existing good writing. Then through a series of incremental steps, they develop the ability to write their own original compositions.

What is this approach to writing known as? Tribble (1996) defines the process approach as an approach "to the teaching of writing which stresses the creativity of the individual writer, and which pays attention to the development of good writing practices rather than the imitation of models."

What is the writing process for kids? The writing process is a set of steps that you can take to make writing easier for you. These steps are prewriting, drafting, revising, editing, and publishing. Working through these steps can help your writing to be the best it can.

The Poetics of Space: A Q&A with Gaston Bachelard

Q1: What is the main thesis of Gaston Bachelard's "The Poetics of Space"?

A: Bachelard argues that space is not simply a physical or geometric concept, but rather a subjective and imaginative realm that is shaped by our experiences and emotions. He proposes that we inhabit different "poetics of space," or ways of experiencing and imagining space, which influence our thoughts, feelings, and actions.

Q2: How does Bachelard define "the house"?

A: For Bachelard, the house is a privileged space that represents our inner world. It is a place where we feel safe, sheltered, and connected to our family and memories. The house is also a repository of our dreams, fears, and fantasies, and it often serves as a metaphor for the human psyche.

Q3: What is the significance of "images of space" in Bachelard's theory?

A: Images of space, such as a curved line or a spiral staircase, are powerful symbols that evoke certain emotions and associations. Bachelard argues that these images are not arbitrary but rather arise from our deep-seated psychological experiences. By studying images of space in literature and art, we can gain insights into the human mind and its relationship to the world.

Q4: How does Bachelard relate the poetics of space to the imagination?

A: The poetics of space and the imagination are intimately connected. Bachelard believes that imagination is not simply a process of creating new ideas, but rather a

AND

way of experiencing and interpreting the world differently. The imagination allows us to transform physical space into a symbolic and meaningful realm that is full of possibilities.

Q5: What are the implications of Bachelard's work for architecture and urban planning?

A: Bachelard's theories have significant implications for the design of buildings and cities. By understanding the poetics of space, architects and planners can create spaces that are not only functional but also foster human well-being and creativity. His work has inspired a movement towards more humane and sustainable urban design that takes into account the psychological impact of the built environment.
