## **Year 8 Exploring Science Test Answers**

### **Question 1: What is the difference between a hypothesis and a theory?**

**Answer:** A hypothesis is an educated guess that can be tested through experimentation. A theory is a well-supported explanation that integrates a wide range of observations and experiments.

### **Question 2: Describe the process of osmosis.**

**Answer:** Osmosis is the movement of water across a selectively permeable membrane from an area of high water concentration to an area of low water concentration. It occurs to maintain equilibrium and is crucial for the functioning of cells.

### **Question 3: How does the human body regulate body temperature?**

**Answer:** The human body regulates body temperature through sweating, shivering, and dilation or constriction of blood vessels in the skin. The hypothalamus in the brain acts as the body's thermostat and triggers these responses to maintain a stable temperature.

### **Question 4: What are the different types of chemical reactions?**

**Answer:** There are various types of chemical reactions, including:

- Combination reaction: Two or more substances combine to form a single product

- Decomposition reaction: A single substance breaks down into two or more products
- Single replacement reaction: An element replaces another element in a compound
- Double replacement reaction: Ions exchange between two compounds

**Question 5: Explain the role of enzymes in chemical reactions.**

**Answer:** Enzymes are biological catalysts that speed up chemical reactions by lowering the activation energy required for the reaction to occur. They do not get consumed or changed in the process, and they are specific to particular reactions. Enzymes play a crucial role in various biological processes, such as digestion and metabolism.
