The Rodale Book of Composting: Q&A

The Rodale Book of Composting, by Grace Gershuny, is an essential guide for any gardener looking to master the art of composting. With over 50 years of experience, Gershuny provides comprehensive and easy-to-follow methods for turning organic waste into nutrient-rich compost.

Q: What are the benefits of composting?

A: Composting transforms organic waste, such as food scraps, plant clippings, and yard debris, into a nutrient-dense soil amendment. It improves soil structure, increases water retention, suppresses plant diseases, and reduces the need for chemical fertilizers.

Q: How do I start a compost pile?

A: Choose a well-drained location and gather a mix of "brown" (dry, carbon-rich) and "green" (wet, nitrogen-rich) materials. Alternate layers of brown and green materials, ensuring that the pile has adequate moisture and air circulation.

Q: How long does it take to create compost?

A: The composting process can take several weeks to months, depending on factors such as temperature, moisture, and the materials used. Regularly turning the pile helps accelerate the decomposition.

Q: What are some common composting methods?

A: Gershuny's book covers various composting methods, including:

- **Bin composting:** Using a composting bin or tumbler to contain and mix materials.
- **Cold composting:** A slower process that takes place in a pile outdoors.
- **Hot composting:** A faster method that requires regular turning and maintaining high temperatures.

- **Bokashi composting:** Using a microbial inoculant to ferment kitchen waste in a sealed container.

Q: Can I compost everything?

A: Most organic waste is suitable for composting, but there are exceptions. Avoid composting animal products, diseased plants, and certain weeds that may spread. Additionally, some materials break down slowly and may require additional processing, such as shredded paper or wood chips.
