How do you draw a porg step by step?

How old is baby Yoda? Backstory. A member of the same species as the Star Wars character Yoda, he is 50 years old during the events of The Mandalorian "Chapter 1: The Mandalorian", but still appears to be an infant because of the pace at which that species matures.

How to make a cool S?

How to draw sun for kids?

How to make a star in space? On a basic level, it's quite simple to build a star. Simply gather a star's worth of gas and dust, let it collapse together under its own weight, and given enough time a star will form. This is how stars form naturally.

How is a star born for kids? Stars form from an accumulation of gas and dust, which collapses due to gravity and starts to form stars. The process of star formation takes around a million years from the time the initial gas cloud starts to collapse until the star is created and shines like the Sun.

How is a star born Grade 9? A star is born when atoms of light elements are squeezed under enough pressure for their nuclei to undergo fusion. All stars are the result of a balance of forces: the force of gravity compresses atoms in interstellar gas until the fusion reactions begin.

What is star for kids? Stars are huge, glowing balls of gases. The closest star to Earth is the Sun. Most of the pinpricks of light that shine in the night sky are also stars. Countless more stars are too far from Earth to be seen without a telescope. Most stars are incredibly far away.

How to draw a star with a pencil? Place your pencil on the top mark. Skip the first mark to the left and connect the top mark to the second mark to the left. Draw a second mark straight across to the right, skipping the mark on the bottom. Finish by connecting that mark to the top mark.

How to draw a perfect star?

Can a star have 7 points? The heptagram, or 7 point star, is a symbol with deep historical roots. Unlike the 6 point star, which is a hexagram, the heptagram is a self-intersecting seven-sided polygon that has been employed in various contexts throughout history.

How is Yoda a puppet? Yoda was originally portrayed by a puppet created by Stuart Freeborn and Wendy Froud. Freeborn based Yoda's face on his own facial features and those of Albert Einstein, hoping the latter inspiration would make the character appear intelligent.

Is Baby Yoda 900 years old? But this wide-eyed child in Star Wars' The Mandalorian is a whopping 50 years old. This makes sense, given that one of the only other known members of his mysterious species — Yoda — lived to the ripe old age of 900.

Is Baby Yoda a boy or a girl? We learned he was a male after Doctor Pershing referred to Baby Yoda as "him" in the third episode. And we know he is 50 years old, but because his species ages slowly, he is still considered an infant.

Is Grogu 50 years old? Baby Yoda is 50 years old at the beginning of "The Mandalorian." Though his age seems old, Grogu is still developmentally a child, and this is due to how slow his species matures.

How to make a star like a pro?

What is a star kids?

What do stars look like for kids? Stars are huge balls of burning gases, most of which are made of hydrogen. As the hydrogen gas in a star is squeezed due to gravity, it produces huge amounts of energy, which make it glow. The size, temperature, brightness, and color of stars vary. The color of a star is determined by its temperature.

How is a star born for dummies? Stars are born when large gas clouds collapse under gravity. They form hot cores that gather more and more gas and dust until a protostar is formed. If only a small amount of gas is around, then only a small star will form; if a large amount of gas is present, then a massive star will form.

How do I draw a 5 point star?

How many ways can you draw a star? Two different ways to draw a star are by placing two regular shapes one on top of the other or by drawing diagonals to alternate points on regular shapes.

Question: Find the value of x that satisfies the equation $2x + 5 = 13$.

Answer: Subtracting 5 from both sides of the equation, we get: $2x = 13 - 5$ $2x = 8$
Dividing both sides by 2, we find: $x = 4$

Question: A farmer has 1000 chickens. He sells 25% of them and buys 150 new chickens. How many chickens does he have now?

Answer: Step 1: Find the number of chickens he sells: $1000 * 25\% = 250$ chickens
Step 2: Find the total number of chickens after selling: $1000 - 250 = 750$ chickens
Step 3: Add the new chickens: $750 + 150 = 900$ chickens Therefore, the farmer now has 900 chickens.

Question: A rectangular garden has a length of 12 m and a width of 8 m. Find the area of the garden.

Answer: The area of a rectangle is given by the formula: $\text{Area} = \text{length} \times \text{width}$
Substituting the given values, we get: $\text{Area} = 12 \text{ m} \times 8 \text{ m}$ $\text{Area} = 96$ square meters

Question: Solve the inequality $x - 5 < 2$.

Answer: Adding 5 to both sides of the inequality, we get: $x - 5 + 5 < 2 + 5$ $x < 7$
Therefore, the values of x that satisfy the inequality are less than 7.

Question: A car travels 240 km in 4 hours. What is the average speed of the car in km/h?

Answer: The average speed is calculated as: $\text{Speed} = \text{Distance traveled} / \text{Time taken}$
Substituting the given values, we get: $\text{Speed} = 240 \text{ km} / 4 \text{ h}$ $\text{Speed} = 60 \text{ km/h}$
Therefore, the average speed of the car is 60 km/h.
