**What's your favorite piece of tech-related trivia or fun fact?** The first computer mouse was made of wood. The term “bug” to describe a glitch in a system originated when a moth caused a malfunction in an early computer. The average person spends over 4 hours a day on their mobile devices. Apple's iPhone has more

computing power than NASA's computers during the moon landing.

### **What is the most commonly ask questions for IT?**

**What are the four main information technology?** The four most basic and primary elements involving the use of all information technology include: information security, computer technical support, business software development and database and network management.

**What are the basics of information technology?** Information Technology (IT): Fundamentals & Core Concepts. Simply defined, Information Technology (IT) is the use of computers and related technology, such as software, cloud-based applications, and networks to communicate or transmit data, build organizational infrastructure, and secure information.

**What does IT stand for in technology?** Information technology (IT) is a broad professional category covering functions including building communications networks, safeguarding data and information, and troubleshooting computer problems.

**What is information technology in one word?** 01), Information Technology means the use of hardware, software, services, and supporting infrastructure to manage and deliver information using voice, data, and video. To further this definition for IT budgeting and procurement, NDIT offers the following guidance.

### **What are the basic technical questions?**

### **What is the biggest problem in technology?**

**What is the simple answer of technology?** Technology is the application of conceptual knowledge to achieve practical goals, especially in a reproducible way. The word technology can also mean the products resulting from such efforts, including both tangible tools such as utensils or machines, and intangible ones such as software.

**What are some fun questions about information technology?** Here are some examples of IT trivia questions you might come across: What is the most widely used programming language? Who created the World Wide Web? What is the name of

the first computer virus? What was the first search engine?

No matter their specific IT role, members of an IT department work with others to solve technology problems, both big and small.

**What are the 3 components of information technology?** As discussed before, the first three components of information systems – hardware, software, and data – all fall under the category of technology.

**What are some deep thinking questions about technology?**

**What questions to ask to get information?** Pose open-ended questions for more explanation. Use “what,” “how,” and “why” to start your questions so people can't answer them with one-word answers. **Apa kekurangan dari karburator?** Kelemahan Sistem Karburator Proses ini dilakukan secara manual dengan mencari komposisi terbaik antara pilot jet dan main jet. Selain itu, komponen karburator yang mengandalkan karet vakum rentan terhadap kerusakan akibat putaran gas dan aliran udara yang tinggi.

**Boros karbu apa injeksi?** Boros Bahan Bakar: Sistem karburator tidak seefisien sistem injeksi dalam mencampur bahan bakar dan udara. Hal ini menyebabkan motor karburator lebih boros bahan bakar.
