artesanas incorporan otro tipo de ingredientes que les aportan aromas, sabores y colores diferentes.

**¿Cómo se elabora la cerveza artesanal?** El proceso de elaboración, consta de 5 etapas: molienda y maceración, lavado de granos, cocción, fermentación, maduración y acondicionamiento. La molienda procura romper el grano malteado, tal que, su interior quede expuesto a la hidratación en el proceso de macerado.

**¿Qué se le echa a la cerveza?** La malta, el agua, el lúpulo y la levadura son los cuatro ingredientes básicos en la fabricación de la cerveza. Cada uno tiene su papel específico, pero se requiere del trabajo en equipo para conseguir el resultado final.

**¿Que le da el sabor a la cerveza artesanal?** La elección de la malta o la mezcla de varias maltas determina en gran medida el sabor y el carácter de una cerveza. En ausencia de adjuntos, es el único responsable del color de la cerveza, que puede anticipar algunas características organolépticas de lo que tenemos en el vaso.

**¿Cuánto tiempo se tarda en hacer cerveza artesanal?** El proceso de elaboración de la cerveza dura, aproximadamente, 42 días y 11 horas. Ese es el tiempo que dedicamos en Ambar con el objetivo de que tu puedas disfrutar de tu bebida favorita durante unos minutos.

**¿Qué es lo que le da el sabor amargo a la cerveza?** El lúpulo (*Humulus lupulus* L) es la planta que confiere el sabor amargo y el aroma tan característicos de la cerveza. **What is the easiest way to learn organic chemistry?** The number one way to study organic chemistry is by doing practice problems. The more problems you do, the better your understanding will be. Once you have mastered one concept, move on to problems that are more difficult. Do a set of practice problems from your book every day to keep up with the material.
