**Is quantum field theory the same as string theory?** QFT is a perturbative theory, meaning that it can only make predictions for systems where the interactions between particles are relatively weak. String theory, on the other hand, is a non-perturbative theory that can describe systems with strong interactions.

**Why do physicists not like string theory?** A simple argument in string theory indicates that the cosmological constant should be at least around 55 orders of magnitude larger than the observed value. This is perhaps the most incorrect

experimental prediction ever made by any physical theory that anyone has taken seriously.

**Has the string theory been proven?** No experiment has definitively proven string theory to be the fundamental theory of nature. However, the ideas of string theory have passed countless theoretical and mathematical tests over the last fifty years. Fundamental physics is a long-game.
