### **Solids, Liquids, and Gases Experiments: One-Hour or Less Science for Last-Minute Projects**

**Question:** What are the different states of matter?

**Answer:** There are three main states of matter: solid, liquid, and gas. Solids have a definite shape and volume, while liquids have a definite volume but no definite shape. Gases have no definite shape or volume.

### **Experiment: Water, Ice, and Steam**

- **Materials:** Ice cube, water, boiling water, clear glass

- **Instructions:** Place the ice cube in the glass. Heat the water until it boils and pour it over the ice cube. Observe the changes that occur.
- **Explanation:** The ice cube is a solid that changes into a liquid (water) when heated. As the water continues to heat, it turns into a gas (steam).

**Question:** How do solids, liquids, and gases behave differently?

**Answer:** Solids have a fixed shape and volume, liquids have a fixed volume but no fixed shape, and gases have neither a fixed shape nor a fixed volume. Solids are often hard and rigid, while liquids are often fluid and can flow. Gases are often invisible and expand to fill their container.

### **Experiment: Marbles in Water**

- **Materials:** Marbles, glass jar filled with water
- **Instructions:** Place the marbles in the jar of water. Observe how they sink or float.
- **Explanation:** The marbles are more dense than water, so they sink to the bottom of the jar. The water exerts an upward force on the marbles, but it is not strong enough to keep them afloat.

**Question:** How can you change the state of a substance?

**Answer:** You can change the state of a substance by adding or removing heat. Heating a substance often causes it to melt (from solid to liquid) or vaporize (from liquid to gas). Cooling a substance often causes it to condense (from gas to liquid) or freeze (from liquid to solid).

### **Experiment: Air Pressure and Water**

- **Materials:** Empty plastic soda bottle, water, sink
- **Instructions:** Fill the bottle about halfway with water. Turn the bottle upside down and place your thumb over the opening. Submerge the bottle in the sink and release your thumb. Observe what happens.
- **Explanation:** The air pressure inside the bottle is greater than the water pressure outside the bottle. This causes the water to stay in the bottle.

When you submerge the bottle, the water pressure outside the bottle increases, causing the air pressure inside the bottle to decrease. This allows the water to flow out of the bottle.

**Question:** What is the difference between a solid, a liquid, and a gas?

**Answer:** A solid has a definite shape and volume, a liquid has a definite volume but no definite shape, and a gas has no definite shape or volume. Solids are often hard and rigid, liquids are often fluid and can flow, and gases are often invisible and expand to fill their container.
