What branch of biology is environment? Final answer: The branch of biology that deals with relationships between organisms and their environments is called ecology.

What is the study of living environment? Ecology is the study of the relationships between living organisms, including humans, and their physical environment; it seeks to understand the vital connections between plants and animals and the world around them.

Is biology living or nonliving? Answer and Explanation: Biology is the study of organisms that were once alive or are still living, but it does not include the study of the non-living organism.

Is living environment the same as earth science? "Earth science" is discussed as a different line of science, studying rocks, minerals, some physics, Chemistry and etc. While "Environmental science" is focused on life. However "Earth science" globally can include "Environmental science" in itself.
