Stephen Mumford on Dispositions: A Springer Conversation

Q: What is a disposition?

A: According to philosopher Stephen Mumford, a disposition is a "capacity or tendency that an object has to behave in a certain way in certain circumstances." Dispositions are often contrasted with occurrent properties, which are properties that an object has at a particular time. For example, brittleness is a disposition that a glass has, while being broken is an occurrent property that it can have if it is hit with enough force.

Q: How do dispositions work?

A: Mumford explains that dispositions are not reducible to occurrent properties. This means that there is no way to describe a disposition in terms of the occurrent properties of an object. For example, we cannot say that brittleness is simply a matter of the glass having a certain molecular structure. Instead, we must say that brittleness is a capacity that the glass has to break when it is hit with enough force.

Q: What is the relationship between dispositions and laws of nature?

A: Mumford argues that dispositions are closely related to laws of nature. He says that "laws of nature are generalizations about the dispositions of objects." For example, the law of gravity is a generalization about the disposition of objects to fall when they are dropped.

Q: How do dispositions help us to understand the world?

A: Mumford believes that dispositions are essential for understanding the world around us. He says that "dispositions are the building blocks of our scientific theories." We use dispositions to explain why objects behave the way they do, and we use them to make predictions about how they will behave in the future.

Q: What are some of the philosophical challenges associated with dispositions?

A: Mumford identifies several philosophical challenges associated with dispositions. One challenge is the problem of emergence. This is the problem of explaining how dispositions can emerge from the occurrent properties of objects. Another challenge is the problem of counterfactuals. This is the problem of explaining how we can make counterfactual claims about dispositions, such as "If I had dropped the glass, it

would have broken."
