Question 1

Find the mean and standard deviation of the following dataset:

{10, 12, 14, 16, 18, 20}

Answer:

Mean = 14 Standard deviation = 3.742

Question 2

A study of the relationship between height and weight found a correlation coefficient of 0.75. Interpret this result.

Answer:

The correlation coefficient indicates a strong positive relationship between height and weight. This means that as height increases, weight tends to increase as well.

Question 3

A pharmaceutical company wants to test the effectiveness of a new drug. They conduct a study in which 100 patients are randomly assigned to receive either the drug or a placebo. After treatment, the patients' health outcomes are compared. How can the company use statistics to determine if the drug is effective?

Answer:

The company can use a hypothesis test to compare the health outcomes of the two groups. If the p-value of the test is less than the pre-specified alpha level, the company can reject the null hypothesis and conclude that the drug is effective.

Question 4

A survey of 500 adults found that 250 of them have a college degree. Construct a 95% confidence interval for the proportion of adults in the population who have a college degree.

Answer:

The 95% confidence interval is (0.45, 0.55). This means that we are 95% confident that the true proportion of adults in the population who have a college degree lies between 0.45 and 0.55.

Question 5

A study of the effects of a new educational program found a statistically significant improvement in test scores after the program was implemented. What does this mean?

Answer:

The study provided strong evidence that the educational program had a positive impact on test scores. The term "statistically significant" indicates that the improvement was unlikely to have occurred by chance.
