**Do you need math for life science?** 100 line illus. The life sciences deal with a vast array of problems at different spatial, temporal, and organizational scales. The mathematics necessary to describe, model, and analyze these problems is similarly diverse, incorporating quantitative techniques that are rarely taught in standard undergraduate courses.

**What is 9th grade science called?** Most commonly, 9th graders usually focus on biology; however the beauty of homeschooling is parents can choose what course they want their freshmen to begin with. These can include chemistry or physics.

**What are the two types of data collected in most experiments?** There are two distinct types of data collection and study: qualitative and quantitative. Although both provide an analysis of data, they differ in their approach and the type of data they collect.

**What is the data collected from an experiment called?** Experimental data (singular: datum) are observations made during the experiment.
