

# Atlas copco face drilling rigs technical specification

## Download Complete File

**What is the technical specification of the Boomer 282?** The Boomer 282 is installed with strong aluminum beam with extremely high resistance against bending and stress, feed force reaching up to 15 kN. Optional telescopic feed BMHT series for cross section drilling is also available to select.

**What are the three main types of drilling rigs?** Drilling rigs come in three sizes: singles, doubles and triples. These categories refer to how many lengths of pipe can stand in the rig's derrick. On a single, the derrick holds one length of pipe. A double holds two, and a triple holds three.

**What are the three main components of a drilling rig?** The basic drilling equipment remain the same. A rotary table to turn the pipe and drill bit, a large reservoir of mud material to control the pressures and remove the cuttings, and the derrick to lift the pipe in and out of the hole.

**How do you classify a drilling rig?** 2.1 According to the drilling method, it can be divided into the followings: (1) Impact drilling rigs, such as wire rope impact drilling rigs (daytond rilling rigs), vibration drilling rigs, etc. (2) Rotary drilling rigs, such as those used in rotary drilling.

**What is the boomer generation range?** The Silent Generation – born 1925-1945. The Baby Boomer Generation – born 1946-1964. Generation X – born 1965-1979. Millennials – born 1980-1994.

**What is the lift capacity of the Boomer 35?**

## **What are the 5 types of rigs?**

**What is face drilling?** a method used in conventional mining to drill a hole in the coalbed for inserting explosive charges. The holes are drilled into the rock and packed with explosives.

## **What are the four systems of a drilling rig?**

**What is the suction line on a drilling rig?** Suction line (#3) is an intake line for the mud pump to draw drilling fluid from the mud tanks. Swivel (#18) is the top end of the kelly that allows the rotation of the drill string without twisting the block.

**What is Kelly in drilling rig?** “Kelly” means a 3 or more sided shaped steel pipe connecting the swivel to the drill pipe. The kelly moves through the kelly bushing and the rotary table and transmits torque to the drill string.

**What is the casing line in a drilling rig?** Casing is pipe usually larger in diameter and longer than drill pipe and is used to line the hole. Casing operations occur periodically throughout the drilling process starting with the surface casing, intermediate casing, and ending with production string which takes place during well completion.

**What is the difference between a workover rig and a drilling rig?** Workover rigs are very similar to drill rigs in that they are truck-mounted mobile rigs that travel between job sites on public roads. However, these machines are generally located at the job site for weeks before relocating to a different location.

**What is the difference between a service rig and a drilling rig?** A drilling rig is used in exploration to determine the feasibility of a formation. A service rig is brought to a site after a drilling rig's work is complete to support the well's ongoing production. Service rigs are also used to shut in a well, repair a well or do maintenance to enhance the well's production.

**What is a roughneck on a drilling rig?** What Is a Roughneck on an Oil Rig? A roughneck or floorhand is a drilling crew member who works in highly physically demanding work conditions, under the driller's guidance, to make or break connections as the drill pipe trips in or out of the hole.

---

**What is the difference between Gen Y and Gen Z?** Next comes Generation Y (more commonly known as Millennials), born between roughly 1981 and 1994. The youngest generation in today's workforce is Gen Z, meaning Generation Z, who were born between 1995 and 2009.

**What is Boomer 1 and Boomer 2?** The first, boomers I, were born between 1946 and 1954, while boomers II, aka Generation Jones, were born between 1955 and 1964.

**Why are they called the silent generation?** There are competing theories as to where the name “Silent Generation” came from. This cohort grew up during a period of war and economic depression, so their personality could be seen as being silenced or muted by these events. Certainly, the birth rate did fall during that time period.

**How much does a Boomer 47 weigh?**

**What is the maximum load capacity of a boom lift?** For reference, our boom lift mechanisms are available in load capacities of 50 and 60 lbs. and have maximum working heights of 19.5” and 20.5”.

**What is the range of motion of the Genie z135?** The Jib-Extend™ telescoping jib on the Z™-135/70 model extends from 12 to 20 ft (3.66 to 6.10 m) and provides a 110° vertical range of motion to reach “up, over and in” applications inaccessible by a traditional jib.

**What technology do Boomers use?** Think about the technologies Baby Boomers grew up with— television, fax machines, mobile phones, and the internet were still developing as they started and built their businesses. Now, those in this age group are using smartphones, social media, the cloud, and other variations of these technologies.

**What is a boomer in the Air Force?** Specialty Summary. Performs in-flight refueling aircrew functions and activities according to flight manuals, checklists, and United States Air Force publications. Duties and Responsibilities: Performs in-flight refueling aircrew duties.

**What is the size of Boomers?** The 2020 Census will provide the most up-to-date count of the baby boom generation, now estimated at about 73 million. “Data from the 2020 Census will show the impact of the baby boomers on America's population age structure.”

**What is a boomer equipment?** Boomer M is a robust face drilling rig for tunneling and mining applications. Boomer M is available with diesel or battery driveline. Upgraded safety and ergonomics. Better durability and robustness. Lower operational cost.
