Strength of Materials by R. K. Rajput

Q1: What is the scope of strength of materials?

A: Strength of Materials deals with the analysis and design of structures and components under various loading conditions. It covers fundamental concepts of stress, strain, elasticity, plasticity, and failure, as well as engineering applications such as beams, columns, shafts, and plates.

Q2: What are the primary properties of materials considered in strength of materials?

A: The primary properties are stress, strain, and modulus of elasticity. Stress is force per unit area, strain is deformation per unit length, and modulus of elasticity relates stress to strain within the elastic range.

Q3: What are the different types of loads that can be applied to structures?
