Why no primers for reloading? When it comes to ammunition supplies, bullets are easy to manufacture, brass can be re-used, and powder is generally stockpiled by companies (though perhaps not the kind you're looking for). This leaves primers, which are relatively difficult to make, as the component that causes the bulk of ammo shortages.

Is it necessary to crimp bullets when reloading? In civilian ammunition, crimped primers are really not necessary, but the manufacturers do crimp the bullets in place with good reason to my way of thinking. Inertia generated within a gun can make the bullet shift, usually outward, which is common in magnum revolvers.

Do you need to clean new reloading dies?

How hard is reloading? Reloading takes a lot of time and dedication. You first have to go through and work up a load that shoots well. This can be very frustrating, and you have to tweak the amount of powder and bullet depth to find the right combination that shoots well.

Is reloading ammo cost efficient? It's cheaper to reload, particularly if you use one of the higher priced calibers. 9mm pistol ammo is cheap so you might save 8 to 10 cents a round. On the other hand 10 mm is more expensive so you might save 30 cents a round, rifle ammo even more.

How safe is reloading? Lead is present in primers and most bullets, and the reloader may be exposed to lead when handling reloading components (including fired cases), shooting, or cleaning firearms or reloading equipment.
