## **Topics in Algebra: Solutions to Common Questions**

### **1. What is a linear equation in one variable, and how do I solve it?**

A linear equation in one variable is an equation that can be written in the form  $ax + b = c$ , where  $a$ ,  $b$ , and  $c$  are real numbers and  $a \neq 0$ . To solve a linear equation, you can use the following steps:

- Isolate the variable term on one side of the equation by adding or subtracting the same number from both sides.
- Divide both sides of the equation by the coefficient of the variable to solve for  $x$ .

### **2. What is a quadratic equation, and how do I solve it by factoring?**

A quadratic equation is an equation that can be written in the form  $ax^2 + bx + c = 0$ , where  $a$ ,  $b$ , and  $c$  are real numbers and  $a \neq 0$ . To solve a quadratic equation by factoring, you can use the following steps:

- Factor the left-hand side of the equation.

- Set each factor equal to zero and solve for x.

### **3. How do I solve a system of equations by substitution?**

A system of equations is a set of two or more equations involving the same variables. To solve a system of equations by substitution, you can use the following steps:

- Solve one of the equations for one variable in terms of the other.
- Substitute the expression for that variable into the other equation.
- Solve the resulting equation for the other variable.
- Substitute the value found back into the first equation to find the value of the first variable.

### **4. What is the quadratic formula, and how do I use it?**

The quadratic formula is a formula that can be used to solve any quadratic equation of the form  $ax^2 + bx + c = 0$ :

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

To use the quadratic formula, you simply plug in the values of a, b, and c from your equation.

### **5. How do I simplify algebraic expressions?**

Simplifying algebraic expressions involves manipulating terms in order to make them easier to work with. You can simplify expressions by using the following rules:

- Combine like terms (terms with the same variables and exponents).
- Distribute coefficients over parentheses.
- Factor out common factors.
- Expand products of polynomials.
