**What is the primary purpose of the UCS?** The UCS is useful for entering coordinates, creating 3D objects on 2D work planes, and rotating objects in 3D. The UCS icon changes automatically depending on the current visual style. The colorful 3D icon on the right displays when a 3D visual style is current.

**What is the goal of UCS?** The goal of a UCS product line is to simplify the number of devices that need to be connected, configured, cooled and secured to provide administrators with the ability to manage everything through a single graphical interface. The term unified computing system is often associated with Cisco.

It is an IP-based communications system that allows you to contact your coworkers or customers through audio or video regardless of physical location. The primary function of CUCM is call processing and phone registration.

**How are service profiles used by Cisco UCS Manager?** When a service profile is deployed to a server, UCS Manager automatically configures the server, adapters, fabric extenders, and fabric interconnects to match the configuration specified in the service profile.

**What is the architecture of the UCS manager?** The architecture of Cisco UCS Manager consists of multiple layers with well-defined boundaries. External interfaces provide communication with the outside world (Figure 2). The data management engine (DME) is the central service that manages the components of Cisco UCS.

**What is a capability of Cisco UCS director?** Cisco UCS Director accelerates application deployment with the capability to design, configure, and deploy application-aware infrastructure containers.

**Which is a key benefit of Cisco UCS?** One of the key performance enhancements in Cisco UCS is the ability to virtualize the physical memory installed in the server DIMM slots. This virtualization allows us to increase the effective capability of the physical memory to four times the original capacity.

**What are two tasks you can perform with Cisco UCS Director?** You can use Cisco UCS Director to configure, administer, and monitor supported Cisco and non-Cisco components. The tasks you can perform include the following: Create, clone, and deploy service profiles and templates for all Cisco UCS servers and compute applications.

**Which port does the UCS manager listen to?** By default, in most virtualized environments, Cisco UCS manager listens on port 80 (if not SSL-enabled) or on port 443 (if SSL-enabled) only.

**What is replacing Cisco UCS?** Cisco UCS Manager and Cisco UCS Central are replaced by Cisco Intersight, and Cisco UCS Manager and Cisco UCS Central service profiles become Cisco Intersight server profiles.

**What does UCS manager do?** The Cisco Unified Computing System (UCS) Manager is a management solution that participates in server, fabric, and storage provisioning, device discovery, inventory, configuration, diagnostics, monitoring, fault detection, auditing, and statistics collection.

**What is the role of Cisco UCS Central?** Simplify daily operations by globally managing and automating routine tasks and expediting problem resolution. UCS Central Software enables you to manage multiple Cisco UCS instances or domains across disparate locations and environments. Use it to support up to 10,000 Cisco UCS servers (blade, rack, and Mini).
