World Trade and Payments: Caves and Frankel vs. Jones

Question: Who are Caves, Frankel, and Jones, and what are their contributions to the field of international trade?

Answer: Richard Caves, Jeffrey Frankel, and Ronald Jones are renowned economists who have made significant contributions to our understanding of world trade and payments. Caves is known for his work on multinational corporations and industrial organization, while Frankel has focused on exchange rates and international macroeconomic policy. Jones is an expert on international trade theory and policy, particularly on the role of tariffs and other trade barriers.

Question: What are the main differences between the views of Caves and Frankel on the one hand and Jones on the other regarding the role of exchange rates?

Answer: Caves and Frankel argue that exchange rates play a key role in determining the competitive advantage of countries and the flows of trade and payments. They believe that countries with undervalued currencies will have a trade surplus and that countries with overvalued currencies will have a trade deficit. In contrast, Jones argues that exchange rates have only a temporary effect on trade flows and that in the long run, the real exchange rate (the exchange rate adjusted for inflation) will move to a level that equates the demand for and supply of a country's currency.

Question: How do Caves and Frankel's views on multinational corporations differ from those of Jones?

Answer: Caves and Frankel believe that multinational corporations are agents of globalization and that they play a significant role in promoting world trade and economic growth. They argue that multinational corporations can help to transfer technology and capital to developing countries and that they can create jobs and stimulate economic activity. In contrast, Jones is more skeptical of the benefits of multinational corporations. He argues that they can lead to the exploitation of workers in developing countries and that they can stifle competition and innovation.

Question: What are the implications of Caves and Frankel's and Jones's views for policymakers?

Answer: The different views of Caves and Frankel on the one hand and Jones on the other have implications for policymakers in both developed and developing countries. For example, policymakers who believe that exchange rates play a significant role in trade flows may be more likely to intervene in foreign exchange markets in order to influence the value of their currency. Similarly, policymakers who believe that multinational corporations are agents of globalization may be more likely to welcome foreign investment and to adopt policies that attract multinational corporations.

Question: What are some of the key criticisms of Caves and Frankel's and Jones's theories?

Answer: One key criticism of Caves and Frankel's theory is that it does not take into account the role of non-price factors, such as product quality and marketing, in determining trade flows. Another criticism is that their theory does not fully explain how exchange rates adjust in the long run. Jones's theory has also been criticized for being too simplistic and for not taking into account the role of government intervention in trade and payments.
