UT can detect internal flaws, such as cracks, porosity, lack of fusion, and inclusions, as well as measure the thickness and dimensions of welds.

How to perform NDT test? The most common types of non-destructive testing methods assume the usage of sound waves, acoustic impulses, or gamma rays to perform in-depth material assessments. By combining different methods, NDT technicians can test objects for the smallest cracks, voids, or weld discontinuities, invisible to the naked eye.

What type of test is a visual inspection test? Visual inspection is a form of non-destructive testing (NDT).
