Subtractive Schooling: Oppressing Mexican Youth Through the Politics of Caring

Subtractive schooling, as described by Angela Valenzuela in her seminal work "The Politics of Caring," is an educational practice that undermines the cultural, linguistic, and social identities of Mexican youth. This article explores Valenzuela's analysis of this harmful approach through a series of questions and answers.

Q1: What is subtractive schooling? A1: Subtractive schooling is a mode of education that emphasizes the dominant culture and language while suppressing the home cultures and languages of students from marginalized communities.

Q2: How does subtractive schooling affect Mexican youth? A2: It can erode their cultural self-esteem, diminishing their sense of belonging and connection to their heritage. It also limits their academic success by ignoring their cultural strengths and perspectives.

Q3: What is the "politics of caring" in relation to subtractive schooling? A3: Valenzuela argues that subtractive schooling is often justified by a misguided notion of "caring" for students. By assimilating them into the dominant culture, educators believe they are preparing them for future success. However, this approach fails to recognize the value of students' cultural backgrounds.

Q4: What are the alternatives to subtractive schooling? A4: Additive schooling, as proposed by Valenzuela, focuses on building upon students' cultural experiences and linguistic skills. It creates a supportive learning environment that fosters their cultural identities and academic growth.

Q5: What is the importance of understanding subtractive schooling? A5: Recognizing the harmful effects of subtractive schooling is crucial for promoting educational equity and supporting the well-being of marginalized youth. It requires educators to critically examine their practices and create inclusive classrooms that value all students.
