### **Solution Engineering Economy, 14th Edition (Sullivan)**

**Q1: What is the time value of money and why is it important in engineering economy?**

**A:** The time value of money (TVM) recognizes that money today is worth more than the same amount in the future due to its potential earning power. It's crucial in engineering economy because it allows engineers to compare the financial equivalence of cash flows occurring at different times.

**Q2: Describe the concept of present worth and its role in decision-making.**

**A:** Present worth (PW) is the sum of all cash flows over a project's life, converted to their present value at a specified discount rate. It helps engineers identify the most financially viable option by comparing the PW of different alternatives. The one with the highest PW is typically the most profitable.

**Q3: What is the relationship between the discount rate and the present worth of a project?**

**A:** The discount rate, also known as the cost of capital, represents the minimum rate of return required by investors. A higher discount rate implies a greater time preference for money, which leads to a lower PW. Conversely, a lower discount rate results in a higher PW.

**Q4: Explain the concept of annual equivalent cost and how it can be used to evaluate projects.**

**A:** Annual equivalent cost (AEC) is the equivalent annual uniform cash flow that has the same present worth as the actual cash flow series. It's useful for comparing

projects with uneven cash flows over time and helps determine which option has the lowest average annual cost.

**Q5: What are some factors to consider when selecting the appropriate discount rate for a project?**

**A:** The choice of discount rate should reflect the project's risk, time frame, and potential earning power. Factors to consider include: (a) the risk-free rate, (b) the project's risk premium, (c) the inflation rate, and (d) the company's cost of capital.

For example, the importance of hierarchy is reflected in the way that Japanese society is structured, with clear distinctions between superiors and subordinates. The strong sense of community is evident in the way that Japanese people interact with each other, often putting the needs of the group before their own. And the deep appreciation for beauty and nature is evident in the way that Japanese people design their homes, gardens, and public spaces.
