Subpersonalities: The People Inside Us

By John Rowan

What are subpersonalities?

Subpersonalities are parts of our psyche that are formed during childhood in response to our experiences. They are like little "people" inside us, each with their own unique thoughts, feelings, and behaviors. Subpersonalities can be positive or negative, and they can either help or hinder us in our lives.

How do subpersonalities form?

Subpersonalities form when we experience a traumatic event or when we are exposed to prolonged stress. In order to cope with these experiences, our minds create parts of ourselves that can take on the burden of the pain. These parts can become subpersonalities.

What are the different types of subpersonalities?

There are many different types of subpersonalities, but some of the most common include:

- **The inner child:** This subpersonality is the part of us that is still connected to our childhood experiences. It is often playful, creative, and imaginative.
- **The protective parent:** This subpersonality is the part of us that is responsible for keeping us safe. It is often strong, assertive, and protective.
- **The critical parent:** This subpersonality is the part of us that is responsible for criticizing our actions and thoughts. It is often negative, judgmental, and perfectionistic.
- **The saboteur:** This subpersonality is the part of us that is responsible for sabotaging our goals. It is often self-destructive, negative, and pessimistic.

How can subpersonalities affect our lives?

Subpersonalities can have a significant impact on our lives. They can influence our thoughts, feelings, and behaviors. They can also sabotage our relationships, our career, and our overall well-being.

How can we work with subpersonalities?

There are many different ways to work with subpersonalities. One way is to simply become aware of them. Once we are aware of our subpersonalities, we can start to understand how they are affecting our lives. We can then begin to work with them in a positive way.
