What is the synopsis of monkeyluv and other essays on our lives as animals?

Organized into three sections, each tackling a Big Question in natural science, Monkeyluv offers a lively exploration of the influence of genes and the environment on behavior; the social and political -- and, of course, sexual -- implications of behavioral biology; and society's shaping of the individual.

What does Robert Sapolsky say about free will? We do not originate our choices ex nihilo; instead, they are determined by our history. As Sapolsky puts it, bluntly: The intent you form, the person you are, is the result of all the interactions between biology and environment that came before. All things out of your control.

What is the major message to the animals? Old Major inspires the animals to rebel According to Old Major 'All men are enemies. All animals are equal' and one day there will be a rebellion. He then teaches the animals a song called 'Beasts of England'. The song is about animals overthrowing man and being free.

What is the main point of the thinking animal argument? Thinking-animal argument A person that occupies a given space also has a Homo sapiens animal occupying the same space. The Homo sapiens animal is thinking. The person occupying the space is thinking. Therefore, a human person is also a human animal.

What is Sapolsky's theory? Sapolsky's theory of Human Behavioral Biology posits that all behavior has biological underpinnings shaped by natural selection. Understanding human behavior requires consideration of myriad factors, from brain connections to evolutionary history.

What did Robert Sapolsky argue? Sapolsky argues for “hard determinism.” The world is deterministic and there is free will. Stated another way: a deterministic world is compatible with free will. Sapolsky notes the vast majority of philosophers and legal scholars maintain this position.

What is the main problem with our free will? The notion that all propositions, whether about the past, present or future, are either true or false. The problem of free will, in this context, is the problem of how choices can be free, given that what one does in the future is already determined as true or false in the present.
