What is the difference between AF-I and AF-S in Nikon? AF-S (AF-I) The difference between these lenses is that AF-S / AF-I lenses contain a focusing motor built into the lens, rather than using the auto focus motor built into the camera body. This system enables faster focusing and in the case of the AF-S lenses near silent auto focusing.

What is the difference between AF A and AF C on Nikon cameras? AF-A (auto autofocus) automatically switches between AF-S and AF-C modes, depending on the subject under the active focus point(s). If the camera thinks the subject is static, it switches to AF-S. If the subject moves, it changes to AF-C.
