**Why is general chemistry so hard in college?** As a specialized field, chemistry has a “language” of its own. From the names of elements to various laws and processes, there's a whole new set of terms to learn and understand. Some terms come from Greek and Latin words, which some students may find harder to remember.

**What is Schrodinger's model?** The Schrödinger model assumes that the electron is a wave and tries to describe the regions in space, or orbitals, where electrons are most likely to be found.

**What is the center of the atom called?** The centre of the atom is called the nucleus. It consists of protons and neutrons. Electron is a negatively charged species that revolves around the nucleus in fixed orbits.

**What is the atomic theory for dummies?** All matter is composed of extremely small particles called atoms. Atoms of a given element are identical in size, mass, and other properties. Atoms of different elements differ in size, mass, and other properties. Atoms cannot be subdivided, created, or destroyed.
