What are the rules of debug?

What is the #1 rule of coding debugging? Rule #1: Understand the system You need to have a good understanding of the system you are trying to debug. It helps not just in finding the bugs but also in fixing them without breaking something else.

What is the golden rule of debugging? Always fix the first error first.

What are the 7 debug steps?

What are the 5 stages of debugging?

What is the 90 10 rule in software engineering? In software engineering, it is often a better approximation that 90% of the execution time of a computer program is spent executing 10% of the code (known as the 90/10 law in this context).

How do you debug code step by step?

What are the tricks used for debugging? Top debugging techniques include understanding the problem, backtracing, using debugging tools, setting breakpoints, binary search, rubber ducking, log analysis, clustering bugs, taking breaks, and learning from each debugging session.

What are the four steps of debugging? In two controlled student experiments, they observed a four-step model of debugging behavior: 1) comprehend the system;

2) test the system; 3) locate the error; and 4) fix the error.

What is the law of debugging? Kernighan's law: "Debugging is twice as hard as writing the code in the first place. Therefore, if you write the code as cleverly as possible, you are, by definition, not smart enough to debug it."

What is F9 in debug? To set a breakpoint in source code: Click in the far left margin next to a line of code. You can also select the line and press F9, select Debug > Toggle Breakpoint, or right-click and select Breakpoint > Insert breakpoint. The breakpoint appears as a red dot in the left margin.

Why is debugging so difficult? This debugging challenge is hard because these particular problems don't break down easily into visually reducible sub-problems. That is, it can be a real challenge when working with problems like these is to first identify the problem in the trace, and then to be able to walk backwards from there to the bug.

How to debug quickly?

Winningham Nursing Case Studies: Respiratory

Case Study 1: Asthma Exacerbation

- **Question:** A 25-year-old male presents to the emergency department with shortness of breath, wheezing, and chest tightness. He has a history of asthma. Vital signs reveal a respiratory rate of 28/min, pulse oximetry of 88%, and blood pressure of 140/90 mmHg.
- **Answer:** The patient is likely experiencing an asthma exacerbation. Treatment includes high-flow oxygen therapy, bronchodilators (e.g., albuterol), and systemic corticosteroids (e.g., prednisone).

Case Study 2: Pneumonia

- **Question:** A 68-year-old female presents with a 3-day history of cough, fever, and chills. Chest auscultation reveals crackles in the right lower lobe. A chest X-ray confirms pneumonia.

- **Answer:** The patient has community-acquired pneumonia, likely caused by *Streptococcus pneumoniae*. Treatment includes antibiotics (e.g., amoxicillin-clavulanate), antipyretics, and rest.

Case Study 3: Respiratory Distress Syndrome (ARDS)

- **Question:** A 30-year-old male with sepsis and acute lung injury develops sudden respiratory distress. Chest X-ray reveals bilateral infiltrates, and arterial blood gas analysis shows severe hypoxemia ($\text{PaO}_2 < 60 \text{ mmHg}$).
- **Answer:** The patient is experiencing ARDS. Treatment includes mechanical ventilation, fluid management, and antibiotics.

Case Study 4: Pleural Effusion

- **Question:** A 45-year-old female with a history of congestive heart failure presents with shortness of breath and a cough. Chest auscultation reveals decreased breath sounds on the left side. A chest X-ray shows a left-sided pleural effusion.
- **Answer:** The patient has a transudative pleural effusion caused by her heart failure. Treatment includes diuretics, fluid restriction, and potentially a thoracentesis to remove the fluid.

Case Study 5: Pulmonary Embolism

- **Question:** A 50-year-old male with a history of deep vein thrombosis presents with sudden chest pain, shortness of breath, and hemoptysis. A CT angiogram confirms a pulmonary embolism.
