

9 mm load data handloads com

[Download Complete File](#)

What is the max load for a 9mm? The 9mm is versatile and can be loaded to higher pressures for more speed and power for situations that call for it. The standard maximum average pressure limit established by SAAMI is 35,000 psi. A higher pressure limit, referred to as +P (plus pressure), is 38,500 psi.

What is the overall length load data for a 9mm? The maximum allowable Cartridge Over-All Length for the 9mm is 1.169". Some reloading manuals list the minimum Over-All Length for different loads, e.g., 1.100" for a 124 grain Jacketed Bullet when using Accurate #2 powder, according to my Lee manual.

How many different 9mm rounds are there?

How much does a 9mm bullet weigh? 9mm bullets weigh 115 to 147 grains (7.5 to 9.5 grams). 9mm handguns can range from about 1 pound to almost 3.5 pounds, empty.

What is the maximum pressure for 9mm? The SAAMI pressure limit for the 9x19mm Parabellum is set at 241.32 MPa (35,001 psi) piezo pressure.

What is a 9mm major load? 9mm Major, also known as 9 Major, ammunition is loaded much hotter than typical 9mm rounds, exceeding 1,550 ft/s (470 m/s) to achieve a power factor of 165. This classification benefits competition shooters as it allows maximum magazine capacity and scoring.

What are common 9mm loads? Common bullet weights for 9mm include 115gr, 124gr, 125gr, and 147gr. Generally speaking, heavier bullets hit harder, have more recoil, and are more expensive. Most people practice with 115gr ammo, and carry heavier stuff for personal defense.

What is the accurate distance for 9mm? Most handguns, including 9mm and other defensive-grade calibers, will do well sighted at about 25 yards. You might possibly wish to sight something like a .22LR at a shorter distance, and hunting revolvers in heavy calibers should probably be sighted in at least at 50 if not 100 yards.

What is the FBI 9mm load? After a thorough review, the Federal Bureau of Investigation (FBI) selected the Hornady Critical Duty 9mm+P 135 gr FTX handgun ammo for its official service rounds. The unique Hornady Flex Tip technology in the FlexLock bullet provides consistent barrier penetration and enhances the bullet's expansion.

How many bullets can a 9 mm carry? Most 9mm handguns feature magazines that range from 12 to 15 rounds, although some pistols have insane capacity (the Glock drum magazine comes to mind).

What is the difference between 9mm and 9x19mm? They are identical and different in name only. Despite what name these rounds carry, when you hear someone refer to a 9mm, they are most likely referring to a 9mm Luger or 9x19mm Parabellum which are one and the same cartridge.

What is the range of a 9mm bullet? "A 9mm bullet travels around 1500 ft/s. It will travel around 2500 yards before it falls."

Is heavier 9mm better? Lighter bullets will hit lower on the target and heavier bullets will hit higher. The reason for this is, "barrel time." Heavier bullets will be in the barrel longer and the weapon is in recoil with the bullet in the barrel. The muzzle will be higher when the bullet exits and the point of impact will be higher.

How fast is a 9mm bullet in km h? A bullet from a 9mm Luger handgun, by comparison, would cover half that distance at speeds of up to 1,360 mph (2,200 km/h). Something like an AK-47, among the most common firearms in the world, doesn't fire bullets any faster than many other rifles, with a muzzle velocity of about 1,600 mph (2,580 km/hr).

How heavy is 1000 rounds of 9mm? 9mm come in varying weights so of course 1000 rounds will weigh differently depending on the weight of the actual bullet. That being said I weighed one single cartridge of 9mm 115 gr FMJ (full metal jacket)

which was 12 grams. Multiply that by 1000 and get 12,000 grams which is 423.288 ounces or 26.456 pounds.

How high will a 9mm bullet go in the air? A .30-06 cartridge will go 10,000 feet high and take 58 seconds to come back down. A 9 mm will go 4000 feet and take 37 seconds to come back down.

What is the maximum lethal range of a 9mm? The round, through a 5? “full-length” pistol barrel, was designed to be lethal at any distance out to 50m. Most defense experts consider the round to be “effective” (as in it's not only lethal but can be easily kept on target) out to about 25m.

What is the best standard pressure 9mm ammo?

What is the maximum pressure for a 9mm bullet? The 9mm Parabellum cartridge (commonly called 9mm Luger in the US) has traditionally been loaded more lightly on this side of the Atlantic than in Europe. The Sporting Arms and Ammunition Manufacturing Institute (SAAMI) has set a pressure ceiling for standard pressure 9mm Para at 35,000 pounds per square inch (psi).

What is the most common 9mm load? 115 grain 9mm ammunition is the most common loading available today. The vast majority of these rounds are FMJ and are often the least expensive option for plinking. If you want to blast paper or steel targets either at a shooting range or a competition, these are your go-to rounds.

What is the common bullet weight for 9mm? The same goes for self-defense. If you shoot 9mm, start with a 124 grain bullet and then decide if you want to stick with that or move up or down the scale. The most common heavy 9mm bullet is 147 grain, and they go as low as 100-115 grains.

How much ammo can a 9mm hold? It depends on the model of the gun and the magazine in it. Some 9mm pistols hold 8 or 9 bullets. Some hold 17/18 in them depending on how they are loaded. If you get an aftermarket magazine, some of those let a 9mm pistol hold like 33 bullets or even up to 100 bullets.

What is the heaviest 9mm load? What is the highest 9mm GR bullet out there? - Quora. Typically, 147 grains is the heaviest bullet available from most suppliers, even in hard-cast lead. There are a few specialist suppliers out there, though, and

the largest I've ever come across is 185 grains from Seismic Ammunition.

What is the max range 9mm? "A 9mm bullet travels around 1500 ft/s. It will travel around 2500 yards before it falls."

What is a hot 9mm load? The "hottest" (by which I take to mean either highest velocity or highest energy) commercial 9mm ammo that I've found is Buffalo Bore 9mm 115 grain +P+ . This round features a 1400 ft/s muzzle velocity, and 500 ft-lbs of muzzle energy.
