Physiology, on the other hand, deals with the internal mechanisms and the processes that work towards sustaining life. These can include biochemical and physical interactions between various factors and components in our body.

Physiology studies the function of the body, ranging from the study of individual molecular function to the function of the entire organism.

How can I memorize anatomy and physiology fast? Try to visualize the anatomical structures by looking at your own body. Examine your body and picture the structure and its location in your head. Another effective way to remember the information is to write it down. Also, you can say it aloud or combine both of these methods.

How do I prepare for the A&P exam? Read, watch videos, take quizzes, draw anatomical structures, and color them in. The more channels into your brain, the better the flow. "Be prepared to change [your] learning methods, and experiment with other ways of learning, rather than 'read, write, and recite,'" says Langston.

What is the best way to take anatomy and physiology notes? Consider handwriting your notes instead of typing them on your laptop or phone, and keeping all notes together in one notebook or binder. If your instructor provides PowerPoints or other materials before class, read and/or print before class. You can add your own notes alongside your instructor's presentation.
