The Metropolitan Revolution: How Cities and Metros Are Fixing Our Broken Politics and Fragile Economy

In his groundbreaking book, "The Metropolitan Revolution," Bruce Katz argues that the future of our democracy and economy lies in metropolitan areas. Cities and metros are not just engines of growth, Katz argues, they are also laboratories of innovation and incubators of civic engagement. They are where people from all walks of life come together to solve problems and build a better future.

But our metropolitan areas are also facing serious challenges. Katz identifies three key challenges:

- **Economic inequality:** The gap between the rich and the poor is growing, and it is particularly pronounced in metropolitan areas.
- **Political polarization:** Cities are becoming increasingly divided along political lines, which is making it difficult to address the challenges we face.
- **Environmental degradation:** Cities are major contributors to greenhouse gas emissions, and they are also vulnerable to the effects of climate change.

Katz argues that we need a "metropolitan revolution" to address these challenges. This revolution must be based on a new understanding of the role of cities and metros in our society. We need to recognize that cities are not just places where people live and work, but also where they come together to solve problems and build

a better future.
