Writing Science: Exploring the Craft with Joshua Schimel

Science writing plays a crucial role in bridging the gap between scientific discovery and public understanding. One renowned expert in this field is Joshua Schimel, who has authored multiple books and articles on the subject. In this interview, we delve into his insights on crafting effective scientific writing.

Q: What are the key elements of good science writing?

Schimel: Clarity, accuracy, and objectivity are paramount. Avoid jargon and overly technical language. Instead, use plain English and vivid descriptions to engage the reader's imagination. Ensure the facts are accurate and supported by evidence, and present both sides of the argument fairly.

Q: How can writers overcome the challenge of explaining complex scientific concepts?

Schimel: Use analogies and metaphors to draw connections to familiar experiences. Break down complex ideas into manageable chunks. Provide examples and concrete illustrations to make the concepts more tangible. Also, consider incorporating visual aids, such as graphs or diagrams, to enhance comprehension.

Q: What is the role of storytelling in science writing?

Schimel: Storytelling can captivate the reader and make scientific topics relatable. By weaving personal narratives or historical anecdotes into your writing, you can create an emotional connection with the audience. However, ensure that the storytelling doesn't compromise the accuracy or objectivity of the science.

Q: How can science writers engage a diverse audience?

Schimel: Recognize that readers have different interests and backgrounds. Tailor your writing style and content accordingly. For example, if targeting a lay audience,

focus on explaining the broader implications of the research in everyday language. For a more specialized audience, provide detailed technical information and references to relevant studies.

Q: What advice would you give to aspiring science writers?

Schimmel: Read widely both scientific and popular science literature. Practice writing regularly, seeking feedback from peers or mentors. Attend workshops and conferences to enhance your skills. Most importantly, be passionate about communicating science and making it accessible to all.
