Determining geological controls on natural environments and habitats and predicting the impact of human activities on them.

**What is the goal of physical geology?**

**What are the three most important concepts in geology?** 1.5 Three Big Ideas: Geological Time, Uniformitarianism, and Plate Tectonics. In geology there are three big ideas that are fundamental to the way we think about how Earth works.

**What is a person who studies rocks called?** Geologists are scientists who study a planet's solid features, like soil, rocks, and minerals. There are all kinds of rocks and minerals that make up our planet – as well as the Moon, Mars, and other rocky worlds.

**Is physical geography a hard class in college?** Over the years, Geography I, the introductory physical course, has provided a substantial challenge for thousands of lower division students. Unfortunately, significant numbers have either failed to complete the course or have earned low marks; thus, Geography I has the reputation of being a "hard" course.

**Does physical geology require math?** In order to use the tools that geologists use while in the field, like geomagnetic field models and scientific geo-mapping technology, math is essential.

**Is physical science hard in college?** Physics is a challenging subject ? it's a combination of math and science that can be difficult even for the best of us.
