**What is the Eurocode 7 code?** In the Eurocode series of European standards (EN) related to construction, Eurocode 7: Geotechnical design (abbreviated EN 1997 or, informally, EC 7) describes how to design geotechnical structures, using the limit state design philosophy.

**What is the difference between ACI and Eurocode?** ACI is basically an empirical code with formulas that resemble rules of thumb sometimes. Eurocode 2 is based on a sound underlying theory of concrete mechanics (see Fédération Internationale du Béton and the Model Code 90) that then is adjusted with coefficients.

**What is the deflection limit for steel AISC?** As a rule of thumb, most calculations are based on a maximum deflection at the midpoint of  $l/360$ , or sometimes  $l/270$ . Example: Over a 20'0" span, the allowable maximum deflection under load (live and dead) would be  $l/360$ th of that, which is about .66 inches, or about  $11/16$ th of an inch.

**What is ASTM standard for structural steel?** ASTM A992 Structural Steel These standards help achieve consensus and maximize performance for a complete array of construction materials, including all types of steel alloys. The ASTM A992 standard specification is employed most frequently in building framing components such as I-beams and wide-flange shapes.

**What is the minimum material thickness for structural steel?** Structural studs must have a minimum steel thickness (base steel) of no less than 0.033 inches. All Bailey studs have a base metal thickness greater than 0.033 inches. The cold-formed steel framing manufacturers use a universal designator system for their products.
